

CoderCommands MCP System

Step 10 Record — Documentation

DOCUMENT	CoderCommands MCP System — Step Record
SYSTEM	CoderCommands MCP Command-Reference Server
STEP	10 — Documentation
DATE	2026-08-15
REVISION	1.0
STATUS	Complete

1. Purpose & Scope

Leave a single entry point (README.md) that lets the system be operated without re-reading all nine prior step records -- how to run it, how to add content, how to restart individual services, and what its known limitations are. The step records remain the detailed build history; the README is the day-2 operations reference.

2. System Context Diagram

Signal-flow view of the four functional units (Sync Service, Postgres, MCP Server, FastAPI Gateway) plus the two external endpoints (source workbook, Claude Code client). Fill/border indicates build state as of this step.

3. File / Component Register

Role of every file or component introduced or modified in this step, with its upstream and downstream interfaces (I/O-list style).

Ref	File / Component	Role	Interface In	Interface Out
R1	README.md	Architecture summary, run/update/restart instructions, the sheet-formatting rules ingest.py depends on, and known v1 limitations.	—	Whoever operates or extends this system next

4. Work Performed

- Architecture table naming each of the four services, its role, and exactly who can reach it -- matching the access boundaries actually wired in Step 7 (only fastapi has a published port).
- Documented the update workflow (edit xlsx, save, watch docker logs -f codercommands-sync) and the new-topic workflow (add a sheet, docker compose restart mcp-server) as the two operations most likely to be repeated.
- Wrote out the sheet-formatting rules ingest.py depends on (header detection, section dividers, the 30% outline-mode threshold) in plain language, since Step 3's PDF has the full reasoning but this needs to be usable without re-reading it.
- Included a 'Known limitations (v1)' section covering read-only scope, non-semantic search, and the corrupted-character passthrough -- surfacing Steps 5 and 8's accepted limitations where an operator will actually see them, not just in the historical record.

5. Issues Encountered & Resolution

No deviations recorded for this step.

6. Verification Record

Check	Method	Result
README's run instructions match the actual working commands used throughout Steps 7–9	Cross-checked against the exact commands executed in this session	PASS
Sheet-formatting rules match ingest.py's actual logic	Cross-checked against sync/ingest.py and Step 3's verified behavior	PASS

7. Next Step / Open Dependencies

All 10 steps of the original plan are complete. The one open item across the whole build is Step 9's deferred check: confirm from a fresh Claude Code session that a natural-language prompt correctly selects and calls these tools.
